Governments of many countries consider the electrification of individual passenger transport as a suitable strategy to decrease oil dependency and reduce transport-related carbon dioxide (CO2) and air pollutant emissions. However, battery-electric vehicles (BEVs) and plug-in hybrid-electric vehicles (PHEVs) have been more expensive than their conventional counterparts and suffer from relatively short electric driving ranges, which still hampers the market potential of these vehicles. Despite persisting shortfalls, mechanisms such as technological learning and economics of scale promise to improve the techno-economic performance of BEVs and PHEVs in the short- to mid-term. Here, the author seeks to obtain insight into the techno-economic prospects of BEVs and PHEVs by: (i) establishing experience curves and (ii) quantifying user costs and the costs of mitigating carbon dioxide and air pollutant emissions in a time-series analysis. The analysis captures the situation in Germany between 2010 and 2016.

Buckle your seatbelt for the introduction of Porsche's 2003 Cayenne to the popular Sport Utility Vehicle market. This official publication chronicles the development of the \$60,000 supercar SUV in hundreds of color photographs. Covers all aspects of the Cayenne, including S or Turbo options, power ranges from 340 to 450 hp, plus technical specifications.

Your Travel Destination. Your Home. Your Home-To-Be. Birmingham Festivals. Architectural gems. Green spaces. Friendly faces. The Magic City.
