Since the beginning of China's economic reform in 1978, private manufacturing firms have played an indispensable role in, and have made a remarkable contribution to, the country's economic development. This book, based on extensive original research, explores the current development challenges for Chinese private manufacturing firms as China's integration with the global economy deepens. At the heart of the book are rich, nuanced empirical case studies of private manufacturing firms in the footwear and electrical equipment industries based in the city of Wenzhou, which was where private enterprise in China was pioneered in the 1980s. Particular subjects considered include the competition situation, the interaction of foreign and indigenous firms in both domestic and international markets, and the facilitating role of industrial development areas.

Openness and competition sparked major advances in Chinese industry. Recent policy reversals emphasizing indigenous innovation seem likely to disappoint.

The authors suggest that China's renewable energy system, the largest in the world, will quickly supersede the black energy system that has powered the country's rapid rise as workshop of the world and for reasons that have more to do with fixing environmental pollution and enhancing energy security than with curbing carbon emissions.

"The Transformers" is all about Simplification and the Digital Enterprise. The story takes you on a journey through the digital world in times when economic conditions force companies to manage their bottom-line rigorously. Despite these conditions, digitization is in full swing. Digital strategies that are simple and understandable can create competitive advantages for companies' futures, shielding them from potential future threats. Published right in time, the book "The Transformers" shows how companies can immediately save cost with data transformation at the push of a button, and, at the same time, accelerate its digitization. It will empower you to drive transformation and end-to-end information management of the digital core successfully. "The Transformers" lays out the digital building blocks for businesses and introduces Artificial Intelligence and digital platforms to tackle Big Data. Also included, detailed descriptions of Digital Business Transformation enhance your understanding while demonstrating its applicability to digitization. The value of enterprises' core data shines like crown jewels that absolutely demand protection and safety. Graesser illustrates how to manage business data rightfully, and he explains the full data life cycle management with a focus on the historization of old data in terms of preservation and protection. The heart of the book consists of two chapters with in-depth explanations of technical platforms needed to conquer the Big Data challenges. The SAP HANA 2.0 platform, with its in-memory database, transforms the meaning of and the value out of Big Data with many advanced analytical capabilities. The Historization platform JiVS IMP by Data Migration International complements the operational enterprise systems with sophisticated data transformation capabilities realizing major value scenarios. In combination, both platforms together allow significant simplification of data management for real-time data business models. Strategic thinking and developing strategies, in principle, is an art more than 2,500 years old. From Battlefield to Greenfield, "The Transformers" bridges the time-gap from ancient China with its famous war strategist Sun Tzu who lived around 500 BC, to the digital era today. The fighting happened then, and it happens today in business with arms, battlegrounds, and warriors. Graesser provides significant insights on how to plan victories and to win battles even without fighting. The visions and strategies are substantial and have never moved out of the central attention of leaders. You can touch and feel Digital Business Transformation with stories about the digital journeys of enterprises across different industries. And the book closes with the 'Tips from the Top' chapter. It features Thomas Failer (founder of Data Migration International), Bjoern Braemer (Senior Vice president at SAP SE), Peter Hartmann (former CIO of the Geberit Group), and Tom Pfister (CEO Nytro Marketing). The book's audiences include C-suite business leaders and will appeal to all decision-makers who drive transformational business or Information Technology programs.

In our increasingly digital, mobile, and global world, the existing theories of business and economics have lost much of their appeal with the phenomenal rise of Chindia, the reality of Brexit, the turmoil caused by the Covid-19 pandemic, and the seismic shifting of the global center of gravity from west to east. In the area of innovation, the traditional thinking that a developed country, often the US, will come up with the next major innovation, launch at home first, and then take it to other markets does not ring true anymore. Similarly, the world where conglomerates go bargain-hunting for acquisitions in emerging markets has been turned upside-down. This book reveals and illustrates the Global Rule of Three phenomenon, which stipulates that in competitive markets only three companies (which the authors call "generalists") can dominate the market. All other players in the market are specialists. Further, whereas the financial performance of generalists improves as market share increases, specialist companies see a decrease in financial performance as their market share increases, as the latter are margin-driven companies. This theory powerfully captures the evolution of global markets and what executives must do to succeed. It is based on empirical analyses of hundreds of markets and industries in the US and globally. Competitive markets evolve in a predictable fashion across industries and geographies, where every industry goes through a similar lifecycle from beginning to end (or revitalization). From local to regional to national markets, the last stop in the evolution of markets is going global. The pattern is so consistent that it represents a distinct and natural market structure at every level. The authors offer strategies that generalists and specialist should follow to stay competitive as well as twelve expansion strategies for global companies from emerging markets. This book chronicles this global evolution and provides impactful managerial implications for executives and students of marketing and corporate strategy alike.

This book provides a holistic picture of the digital age as it emerges in the 2010s. On the background of business analysis concepts from firm to megatrends and all business sectors of the World, the digital age of information systems and digital drivers are thoroughly laid out.

The idea of 'the commons' is a long-standing concept in the English-speaking world and in English law. A similar concept occurs in China. How different from or similar to the English idea of 'the commons' is the idea in China; and how is the concept applied? This book explores this important subject. It examines the subject from a philosophical and theoretical perspective; considers 'the commons' widely, including tangible commons of resources, intangible commons of culture, identity and social capital, and institutional commons of welfare, security and public goods; and goes on to examine the concept as it applies to the hydropower developments along the Lancang River, outlining the different competing interests of local people, central and provincial government, and environmental considerations. It argues that the concept of 'the commons' in China is dual-dimensional, with a vertical dimension of 'public authority' and a horizontal dimension of 'commonly sharing', that power structures in China have often been flexible and polycentric, and that, correctly applied, this approach will do much to serve the common interest of the people, ensuring positive impacts for shared prosperity for multiple stakeholders, whilst mitigating the negative impacts involved in the delivery of such positive impacts.
