signal checkpoints.

Honors Biology- Mitosis and
Meiosis Flashcards - Questions ...

The answer is mitosis. With each division you are making a genetically exact copy of the parent cell, which only happens through mitosis.

Mitosis vs. Meiosis (Read) |

Biology | CK-12 Foundation

22 Questions Show answers.

During this phase of mitosis the centromeres break apart as the separated sister chromatids begin to move to opposite poles. All BUT ONE statement describes an advantage of meiosis. Meiosis ensures that daughter cells receive one of each type of gene and half the chromosome number.

MITOSIS AND MEIOSIS PRE-LAB
ANSWER S 1) Similarities

between mitosis and meiosis are:

They are two major cell cycles that occur in multi-cellular organisms. Both cycles initiate from a diploid parent cell. Both cell cycles produce daughter cells DNA duplication occurs in each cycle.

Differences between mitosis and meiosis are: Mitosis is a type of cell division that produces two genetically identical daughter cells that are diploid.

of chromatids 4. d) Separation of chromatids 5. c) Anaphase I 6. d) Two homologous chromosomes 7.

Meiosis - MCQ Biology - Learning Biology through MCQs

Group of answer choices During meiosis Prophase I, crossing over occurs which increases genetic diversity. During meiosis Prophase I, chromatin condenses and shortens. During mitosis Prophase, spindle fibers pull the sister chromatids apart. During mitosis Prophase, chromatin moves to the central plane of the cell.
