DNA, DNA stands for deoxyribonucleic acid; It is a polymer and has a helical shape. DNA consists of two strands (double-stranded) - made up of alternating sugar (deoxyribose) and phosphate molecules; The two strands are attached to each other by nitrogenous bases. DNA contains 4 bases: 1. Adenine (A) 2. Guanine (G) 3. Thymine (T) 4. Cytosine (C)

The RNA is another nucleic acid that translates genetic information into proteins from DNA. The nucleotides are linked together for the formation of two long strands which spiral to produce a structure known as the double-helix which resembles that of a ladder wherein the sugar and phosphate molecules form the sides while the rungs are formed by the bases.
