intimate relationships elucidated between processing parameters imposed upon stocks employed in thermoforming and the products thereof. Mold designers are provided with a complete guide that will enable them to avoid the less obvious pitfalls and wasted effort so often experienced in the evolution of molds for (especially) complex parts.. Quite likely, Dr. Gruenwald's suggestions will lead to considerable benefits to those who read and practice by this remarkable exposition of thermoforming technology. Robert K. Jordan Director-Metalliding Institute, Director-Engineering Research Institute, Scientist in Residence, Gannon University

This meticulously produced monograph on the prolific French stencil artist C215 collects some of the highlights from more than twenty years spent creating street art around the world. He moves freely between austere black and white and a vibrant color palette that positively leaps off the wall and utilizes a variety of canvases, from doors and walls to trains and mailboxes. The gallery of his artwork contained within is conveniently arranged alphabetically by location or subject of the work.

Includes, beginning Sept. 15, 1954 (and on the 15th of each month, Sept.-May) a special section: School library journal, ISSN 0000-0035, (called Junior libraries, 1954-May 1961). Also issued separately.

C215 is the pseudonym for Christian Gu é my ("The French Banksy"), a master of contemporary street art. He became famous when Banksy invited him to collaborate on some projects, and continues working on the street even today. See his amazing creations, and get to know him through a series of interviews conducted by Alessandra Mattanza. Known for personally photographing his works, C215 himself has taken many of the

images here--and they enrich this intimate portrait.

" Je ne fais pas les choses pour attirer l'attention mais pour susciter l'émotion..." C215 est un street-artiste nomade qui pose ses pochoirs entre Berlin, Amsterdam, Jérusalem, Casablanca, New Delhi, Istanbul... Sans mot ni commentaire, il jette à la face du monde l'image de tous ceux qui souffrent d'exclusion, de pauvreté ou de solitude. Et pour cela, il montre leurs visages. D'un spray deux coups, il interroge les passants et redonne une dignité aux laissés-pour-compte des sociétés urbaines contemporaines. Cet ouvrage d'Opus Délicats présente les travaux du jeune prodige français du pochoir. Son style unique, précis et précis, marque les passants des villes du monde entier.

This book concerns the theory of unipotent elements in simple algebraic groups over algebraically closed or finite fields, and nilpotent elements in the corresponding simple Lie algebras. These topics have been an important area of study for decades, with applications to representation theory, character theory, the subgroup structure of algebraic groups and finite groups, and the classification of the finite simple groups. The main focus is on obtaining full information on class representatives and centralizers of unipotent and nilpotent elements. Although there is a substantial literature on this topic, this book is the first single source where such information is presented completely in all characteristics. In addition, many of the results are new--for example, those concerning centralizers of nilpotent elements in small characteristics. Indeed, the whole approach, while using some ideas from the literature, is novel, and yields many new general and specific facts concerning the structure and embeddings of centralizers.

The precise knowledge of production cross sections for specific radionuclides for medium energies (10 MeV to 100 GeV) of the

Where To Download C215

incident particle gains ever more importance, not only for nuclear physics but also for many applications, e.g. astrophysics, radiation protection at accelerators but also on space flights, radioisotope techniques in medicine and for industrial applications and perhaps even for the removal of nuclear waste by accelerators. Since the last systematic review of these production cross sections in 1973 (LB I/5a, b, c) an impressive amount of new experimental data has been accumulated. In this volume I/13c the production cross section data of volumes I/13a and I/13b for protons are supplemented with respect to heavier targets from I to Am. The precise values of the cross sections can be taken from the tables, whereas the figures show the general trend of the cross sections and can be more readily used for interpolations. The origin of the authors made it possible to include also data from the USSR and other East European states which sometimes are not easy to access. The tables and figures have been compiled with extraordinary care and should present the most complete compilation for this type of nuclear reactions.
