Climatology is the study of the atmosphere and weather patterns over time. This field of science focuses on recording and analyzing weather patterns throughout the world and understanding the atmospheric conditions that cause them. It is sometimes confused with meteorology, which is the study of weather and weather forecasting.

The 3rd edition removed a number of graphs that actually required students to think about concepts and principles of chemistry and physics and apply them to atmospheric sciences like climatology. This removal of info was important, as it shows the authors actually removed content that was applicable to climatology.

Climatology: An Atmospheric ...

Since the 1960s a third main branch, dynamic meteorology, has emerged. It deals primarily with the numerical simulation of climate and climatic change, employing models of atmospheric processes based on the fundamental equations of dynamic meteorology. Other significant subdisciplines of climatology include bioclimatology and paleoclimatology.
