Paper recycling in an increasingly environmentally conscious world is gaining importance. Increased recycling activities are being driven by robust overseas markets as well as domestic demand. Recycled fibers play a very important role today in the global paper industry as a substitute for virgin pulps. Paper recovery rates continue to increase year after year Recycling technologies have been improved in recent years by advances in pulping, flotation deinking and cleaning/screening, resulting in the quality of paper made from secondary fibres approaching that of virgin paper. The process is a lot more eco-friendly than the virgin-papermaking process, using less energy and natural resources, produce less solid waste and fewer atmospheric emissions, and helps to preserve natural resources and landfill space. Currently more than half of the paper is produced from recovered papers. Most of them are used to produce brown grades paper and board but for the last two decades, there is a substantial increase in the use of recovered papers to produce, through deinking, white grades such as newsprint, tissue, market pulp. By using recycled paper, companies can take a significant step toward reducing their overall environmental impacts. This study deals with the scientific and technical advances in recycling and deinking including new developments. Covers in great depth all the aspects of recycling technologies Covers the latest science and technology in recycling Provides up-to-date, authoritative information and cites many mills experiences and pertinent research Includes the use of biotech methods for deinking, refining, and improving drainage

#1 Bestseller in waste management Stop Garbage sheds some light on the world of waste and recycling, topics often filled with questions for most readers. Do we really know why it's important to recycle and the consequences of not doing it? What environmental impact does our behavior have? What trends will prevail in waste management during the next decade? Far from being a technical book, Stop Garbage introduces us to the field of waste and recycling in a clear and enjoyable way. It deals with garbage or waste, whatever you want to call it, but in it you will also find a kidnapping, a destroyer, successes, food waste, the biggest dump in the world, the first incinerator, questions about money and employment or riddles: how many times can you fill the Camp Nou Stadium with one year's waste? How many trees do we save from felling if we recycle paper? What's the best waste in the world? Added to this, multimedia content, articles and videos make up a didactic book of reading which is, without a shadow of a doubt, entertaining. After years of experience in the sector, Alex Pascual (Barcelona, 1976) brings us closer to the key concepts that can help us to formulate our own opinion on the subject. A book full of vital data as well as funny anecdotes that will trigger successive reflections on waste management, undoubtedly one of the pillars of the contemporary and future commitment to the environment. About the author Industrial Engineer specialist in waste management, street cleaning and public services. He has been working in the private sector for many years and now, after more than nine years works as a public services chief for a city council. He also writes on a blog about the same subject www.stopgarbage.com, Twitter profile @stopbasura1 and on Instagram as @stopbasura. Readers reviews " It is a very affordable book for anyone who wants to know how the recycling system works in Spain. With a simple language and away from the technicalities, step by step the writer introduces you to why it is important to recycle, the main magnitudes in our country and the recycling process of each container ." Nicolás "This is a good book to understand the garbage and what represents in our society. It is impressive to read the data and interpretation that the author gives us ..."Luis "Very good book, practical, with a surprising data that reveals and the clarity of the explanation. Despite containing a large amount of information, its reading is enjoyable and facilitated by numerous graphics, links to websites, etc. The book really opens your eyes to the world of recycling! Highly recommended. "Dani

Paper is the largest single component of municipal solid waste, and the recycling of paper must be part of any resolution to the current garbage crisis. Because there are no uniform standards for the generic term "recycled," it is still difficult for paper users to make environmentally responsible purchasing decisions. Myths, misinformation, and confusion abound. This first comprehensive guide to recycled printing and writing papers will therefore be an invaluable resource for anyone involved with printing, production, design, or issues of recycling in general. The book itself, printed on four different types of recycled paper, is a demonstration of the quality that informed designers and publishers can achieve. In concise, nontechnical language, Claudia Thompson explains the dimensions of the solid waste problem, the history of papermaking, the elements of recycled paper production (including current definitions and standards), the physical properties and printing characteristics of recycled papers, the potential impact of designers on recycling, and possibilities for the future. Recycled Papers: The Essential Guide was sponsored by the American Institute of Graphic Arts under the direction of Claudia Thompson, a graphic designer and Principal of Claudia Thompson Design in Cambridge, Massachusetts. Ms. Thompson's work on environmental issues started with the first Earth Day in 1970, and she has been researching the subject of recycled papers since 1988.
