Design for lean manufacturing is a process for applying lean concepts to the design phase of a system, such as a complex product or process. The term describes methods of design in lean manufacturing companies as part of the study of Japanese industry by the Massachusetts Institute of Technology. At the time of the study, the Japanese automakers were outperforming the American counterparts in speed, resources used in design, and design quality. Conventional mass-production design focuses primari

How To Implement Lean Manufacturing

Lean manufacturing, or lean production, is a production method derived from Toyota's 1930 operating model "The Toyota Way". The term "Lean" was coined in 1988 by John Krafcik, and defined in 1996 by James Womack and Daniel Jones to consist of five key principles; 'Precisely specify value by specific product, identify the value stream for each product, make value flow without interruptions, let customer pull value from the producer, and pursue perfection.'

Lean manufacturing - Wikipedia

requirements of product quality and economy. Lean manufacturing is the business model and collection of tactical methods that emphasize eliminating non-value added activities (waste)while delivering quality products at lowest cost with greater efficiency. With these concepts in mind, lean manufacturing is a link to green
