First published in 1999, this volume begins with a panoramic survey by Nigel Harris of the drama of Asian Urbanization, based on the inaugural plenary lecture he gave to the 5th Asian Urbanization Conference held in London. In the following chapters many experts and practitioners from different countries and cities provide a stimulating portrayal of the processes and outcomes of one of the greatest shifts of population (not just absolutely but proportionately as well) ever to have occurred in human history. Asia includes more than half the world's population, but, apart from the Tiger economies and Japan, it is still overwhelmingly rural. In the last decade or so urbanization has really begun to take off and the shift of population to the cities represents one of the greatest population movements the planet has ever seen. By 2030 more than 50% of Asia's population will be urban and between now and then more than 500 million people in Asia will have moved - looking for jobs, housing, food and water. They will be both part of a problem and most of the solution - building around them the cities they will live in.

First published in 1997, this study is one of the forerunners in the area of urban land market and land price studies on a Third World city, focusing on Lucknow City in Uttar Pradesh, India, and exploring house prices, economic changes and construction. Amitabh responds to the 2nd Habitat Conference of 1996, which realised that housing conditions for lower income group people in most Third World cities have not improved, especially with regards to tenure, affordability and overall housing quality.

Planners tend to promote formal plans as the only game in town while diverse efforts of urban actors shape our cities. Tracking the development of American "neighborhood unit" concept in independent India's planning practice and literature—from the national level policies to on-the-ground applications in the city of Jaipur|Vidyarthi explains how a host of actors including neighborhood residents, squatters, politicians and developers made different kinds of plans that assimilated the design concept in line with their practical concerns and cultural preferences creating unique variants of neighborhood urbanism over time. One Idea, Many Plans counters misguided characterization of these unforeseen efforts as [unauthorized] by state authorities. It shows how the frequently informal and tacit plans were neither arbitrary actions nor aimless subversions but purposeful future-oriented efforts that shaped the envisaged sociality and spatiality of Indian cities in more meaningful ways than the official master plans promoting planned neighborhoods. Carefully illustrating the different kinds of plans local actors use to guide incremental adaptation, improvement and investment, Vidyarthi offers insights about how we might improve formal plan making. Scholars, students and professional practitioners interested in different regions of the global south would find these lessons useful as a new generation of city design ideas like sustainability and new urbanism gain traction in an increasingly globalized World.

With the emphasis on market-led development initiatives, sustainable urbanization is a challenge, especially in growing nations. Regional administrative efforts are crucial for cities to meet the planned city operations and specific targets and objectives. The Handbook of Research on Urban Governance and Management in the Developing World is a research publication that explores contemporary issues in regional political and administrative practices and key challenges in implementing these strategies in growing nations. Featuring coverage on a wide range of topics such as urban and regional economics, supply chain management, and environmental concerns, this book is geared toward city development planners, policy makers, researchers, academics, and students seeking current and relevant research on the regional bureaucracy and its practices and how they affect growing nations.
