Manufacturing Shop Traveler Template

Manufacturing travelers are instructions that travel with a part as it is built. They are printed at the time of job release and travel with the job as it moves through the shop to different workstations. As each product step happens, the traveler tracks the status of operations and activities performed by workers.

Manufacturing Traveler Automation | Shop Traveler ...

The job traveler is a simple document, but perhaps one of the most crucial in any fabricating shop. Without that document, a pallet of parts becomes a very large paperweight. The document provides the context to turn the act of value creation into cash.

Of all the components that go into electronic equipment, the printed circuit probably requires more manufacturing operations-each of which must be performed by a skilled person-than any other. As a shift supervisor early in my printed circuit career, I had to hire and train personnel for all job functions. The amount of responsibility delegated to my subordinates depended strictly on how well I had been able to train them. Training people can be a trying experience and is always a time-consuming one. It behooved me to help my workers obtain the highest degree of job understanding and skill that they and I were capable of. One hindrance to effective teaching is poor continuity of thought, for example, having to say to a trainee, "Wait a minute; forget what I just told you. We have to go back and do some thing else first. " It was in trying to avoid pitfalls such as this that I undertook a detailed examination of the processes involved, what I thought each trainee had to know, and what questions they would most frequently ask. From this analysis I developed the various process procedures. Only after I had done so was I able to train effectively and with the confidence that I was doing the best possible job. Answers had to be at hand for all of their questions and in what ever detail they needed to know.

A how-to guide to shortening delivery times, eliminating waste, improving quality, and reducing costs. It describes not only what to do, but includes many tools useful to the reader describing how to do it. It explores tools including kaizen, value stream mapping, takt time, determining optimum lot sizes, setup reduction and problem solving.

On July 6, 1996, at 1424 central daylight time, a McDonnell Douglas MD-88, N927DA, operated by Delta Air Lines Inc., as flight 1288, experienced an engine failure during the initial part of its takeoff roll on runway 17 at Pensacola Regional Airport in Pensacola, Florida. Uncontained engine debris penetrated the left aft fuselage. Two passengers were killed and two others were seriously injured. The takeoff was rejected, and the airplane was stopped on the runway. The airplane with 137 passengers and 5 crew on board was destined for Hartsfield Atlanta International Airport in Atlanta, Georgia.
