For $l = 1$ (a p orbital) this gives us the values of $j = \frac{1}{2}$ and $j = \frac{3}{2}$. There are two p orbitals of the $p_{\frac{3}{2}}$ type and one of the $p_{\frac{1}{2}}$ type. These are no longer degenerate, i.e. $p_{\frac{1}{2}}$ has a lower energy than the $p_{\frac{3}{2}}$ ones.

Matematika se lahko v širšem pomenu deli na proučevanje velikosti, strukture, prostora in spremembe (tj. aritmetika, algebra, geometrija in analiza). Poleg teh osnovnih področij, obstajajo tudi podpodročja, kot so: logika, teorija množic (\setminus), empirična matematika raznovrstnih znanosti (uporabna matematika) in v zadnjem času tudi raziskovanje negotovosti.

Stig Kanger (1924-1988) made important

contributions to logic and formal philosophy. Kanger's dissertation *Provability in Logic*, 1957, contained significant results in proof theory as well as the first fully worked out model-theoretic interpretation of quantified modal logic. It is generally accepted nowadays that Kanger was one of the originators of possible worlds semantics for modal logic. Kanger's most original achievements were in the areas of general proof theory, the semantics of modal and deontic logic, and the logical analysis of the concept of rights. He also contributed to action theory, preference logic, and the theory of measurement. This is the first of two volumes dedicated to the work of Stig Kanger. The present volume is a complete collection of Kanger's philosophical papers. The second volume contains critical essays on Kanger's work, as well as biographical essays on Kanger written

Complete Answers.

This book constitutes the refereed post-proceedings of the Third IFIP WG 9.7 Conference on the History of Nordic Computing, HiNC3, held in Stockholm, Sweden, in October 2010. The 50 revised full papers presented together with a keynote address and a panel discussion were carefully reviewed and selected from numerous submissions. The papers focus on the application and use of ICT and ways in which technical progress affected the conditions of the development and use of ICT systems in the Nordic countries covering a period from around 1970 until the beginning of the 1990s. They are organized in the following topical sections: computerizing public sector
