ET7 | Unit 2

Melodic dictation (also called transcription) involves the ability to hear a piece of music and quickly play it back or write down the notes of the melody. One of the main goals of ear training is to strengthen your powers of visualization - being able to hear a phrase and immediately visualize how it will look and feel when played on your instrument.

1.1 Rationale. All students pursuing a Bachelor's degree in Music from universities accredited by the National Association of Schools of Music must learn to take melodic dictation (NASM 2019, sec. VIII.6.B.2.A). Melodic dictation is a cognitively demanding process that requires students to hear a melody, then without any access to an external reference, transcribe the melody within a limited ...

This book is a hands-on investigation of the stages musicians go through as they learn to hear, read, and perform music. It draws on the latest research in music perception and cognition, music theory, and pedagogy, along with centuries of insight from music theorists, composers, and performers. The first part explores the development of music listening skills, including such broader activities as dictation and transcription, and specific abilities such as meter perception, short-term musical memory, and tonic inference. The second part then examines the skills involved in reading and performing music. It looks at such physical skills as vocal production and

eye movements and at such complex integrated tasks as sight-singing transpositions and modulations. Throughout the book the author presents these skills in their musical contexts and emphasizes their roles in the general development of musicality. Aural Skills Acquisition builds important bridges between music theory, cognitive psychology, and pedagogy. It subjects ideas from music theory to the rigors of psychological testing and combines findings from the psychology of learning with ideas and methods of contemporary music theory. It will prove an invaluable guide for music teachers, music theorists, and psychologists interested in music perception and cognition.

"This book is designed for faculty and graduate assistants working with undergraduate music majors as well as non-majors in colleges and universities in the United States. It includes suggestions for designing and organizing music courses (applied music as well as academic classes) and strategies for meeting the developmental needs of the undergraduate student. It addresses concerns about undergraduate curricula that meet National Association of School of Music requirements as well as teacher education requirements for music education majors in most states. A common theme throughout the book is a focus on "learner-centered pedagogy" (Weimer, 2013) or trying to meet students where they are and

base instruction on their individual needs. The text also maintains a constant focus on the relationship between teaching and learning and encourages innovative ways for instructors to assess student learning in music courses. Teaching is connected throughout the book to student learning and the lecture model of "teaching as transmission of information" (Bain, 2004) is discouraged. Activities throughout the book ask instructors to focus on what it means to be an effective teacher for music courses. As there is limited research on teaching music in higher education, we have relied on comprehensive texts from the general education field to help provide the research base for our definition of effective teaching (Davis, 2009; Svinicki & McKeachie, 2014)"--
