This paper will examine the importance of how medication can help a mental illness physically but not mentally and how society would rather push medication than alternative measures. common, highly disabling, and associated with significant premature mortality. The impact of these disorders on the social and economic well-being of individuals, families, and societies is large, growing, and underestimated. Despite this burden, these disorders have been systematically neglected, particularly in low- and middle-income countries, with pitifully small contributions to scaling up cost-effective prevention and treatment strategies. Systematically compiling the substantial existing knowledge to address this inequity is the central goal of this volume. clinicians and also to demonstrate the practical, individual-level applicability of the subject matter for those who typically work at the public health, population, and/or policy level. Policy implications are discussed throughout, designed to make the content accessible to readers who work primarily at the public health or population level and also to demonstrate the policy relevance of the subject matter for those who typically work at the clinical level. All chapters include five to six key points that focus on the most important content, helping to both prepare the reader with a brief overview of the chapter's main points and reinforce the "take-away" messages afterward. In addition to the main body of the book, which focuses

The editors have succeeded in the difficult task of balancing the individual/clinical/patient perspective and the population/public health/community point of view, while underscoring the need for both groups to work in a unified way to address the inequities in twenty-

Research in the 1970s that addressed this question has since proven seminal to the development of two co-existing fields of research that continue to offer mutually informative insights: Developmental Psychopathology (DP) and Educational Effectiveness Research (EER). DP and EER share the common agenda of understanding factors that relate to individuals' learning and development: DP focuses on the individual learning and developing in context, EER investigates the educational systems, structures, and processes that shape how individuals learn and develop. Given the complementarity of DP and EER, it is somewhat surprising that they have rarely joined forces and synthesised knowledge to
