The second edition of *The Neurology of Consciousness* is a comprehensive update of this ground-breaking work on human consciousness, the first book in this area to summarize the neuroanatomical and functional underpinnings of consciousness by emphasizing a lesional approach offered by the study of neurological patients. Since the publication of the first edition in 2009, new methodologies have made consciousness much more accessible scientifically, and, in particular, the study of disorders, disruptions, and disturbances of consciousness has added tremendously to our understanding of the biological basis of human consciousness. The publication of a new edition is both critical and timely for continued understanding of the field of consciousness. In this critical and timely update, revised and new contributions by internationally renowned researchers—edited by the leaders in the field of consciousness research—provide a unique and comprehensive focus on human consciousness. The new edition of *The Neurobiology of Consciousness* will continue to be an indispensable resource for researchers and students working on the cognitive neuroscience of consciousness and related disorders, as well as for neuroscientists, psychologists, psychiatrists, and neurologists contemplating consciousness as one of the philosophical, ethical, sociological, political, and religious questions of our time. New chapters on the neuroanatomical basis of consciousness and short-term memory, and expanded coverage of comas and neuroethics, including the ethics of brain death. The first comprehensive, authoritative collection to describe disorders of consciousness and how they are used to study and understand the neural correlates of conscious perception in humans. Includes both revised and new chapters from the top international researchers in the field, including Christof Koch,

Marcus Raichle, Nicholas Schiff, Joseph Fins, and Michael Gazzaniga

Attention refers to our ability to selectively process the vast array of stimuli impinging upon our senses at every moment. The mental processes of attention are critical for allowing us to maintain focus and complete tasks efficiently, even within distracting environments. The brain mechanisms of attention have been studied for decades, yet much still remains unknown, and consensus on core issues remains elusive. A unique aspect of this book are chapters that highlight recent debates on critical issues in attention research. Each of these chapters includes a comprehensive discussion paper that is followed by peer commentaries and an authors' responses. These debates include whether attention can modulate activity of even the earliest cortical processing region and whether changes in white matter are critical for plasticity-related effects of attention training. In addition to these discussion chapters, the book presents cutting-edge research on some of the newest theories of attentional control and selective attention, including the influence of practice, epigenetics, reward, social interaction, and distractor suppression. These studies employ advanced cognitive neuroscience methods such as neurostimulation, functional neuroimaging pattern analysis, and the evaluation of oscillatory brain activity to shed light on the brain mechanisms underlying attention. The chapters in this book were originally published as articles in various issues of the journal *Cognitive Neuroscience*.

it is a must for anyone interested in the future of the book. Presenting what he terms “a communism of textual matter,” Nicholas Thoburn explores the encounter between political thought and experimental writing and publishing, shifting the politics of text from an exclusive concern with content and meaning to the media forms and social relations by which text is produced and consumed. Taking a “post-digital” approach in considering a wide array of textual media forms, Thoburn invites us to challenge the commodity form of books—to stop imagining books as transcendent intellectual, moral, and aesthetic goods unsullied by commerce. His critique is, instead, one immersed in the many materialities of text. *Anti-Book* engages with an array of writing and publishing projects, including Antonin Artaud’s paper gris-gris, Valerie Solanas’s SCUM Manifesto, Guy Debord’s sandpaper-bound *Mémoires*, the collective novelist Wu Ming, and the digital/print hybrid of *Mute* magazine. Empirically grounded, it is also a major achievement in expressing a political philosophy of writing and publishing, where the materiality of text is interlaced with conceptual production. Each chapter investigates a different form of textual media in concert with a particular concept: the small-press pamphlet as “communist object,” the magazine as “diagrammatic publishing,” political books in the modes of “root” and “rhizome,” the “multiple single” of anonymous authorship, and myth as “unidentified narrative object.” An absorbingly written contribution to contemporary media theory in all its manifestations, *Anti-Book* will enrich current debates about radical publishing, artists’ books and other new genre and media forms in alternative media, art publishing, media studies, cultural studies, critical theory, and social and political theory.

experienced clinicians, this essential resource encourages readers to see the links between the pathophysiology of a disease, how this creates the signs and symptoms and how these should to be managed in the out-of-hospital environment. Additionally, Paramedic Principles and Practice 2e will arm readers with not only technical knowledge and expertise, but also the non-technical components of providing emergency care, including professional attitudes and behaviours, decision-making, teamwork and communication skills. Case studies are strategically used to contextualise the principles, step readers through possible scenarios that may be encountered and, importantly, reveal the process of reaching a safe and effective management plan. The case studies initially describe the pathology and typical presentation of a particular condition and progress to more-complex and less-typical scenarios where the practitioner faces increasing uncertainty. The only paramedic-specific text designed for Australian and New Zealand students and paramedics Progressive case studies that bridge the gap from principles to practice More than 40 essential pathologies covering common paramedic call-outs Covers both technical and non-technical skills to develop the graduate into expert clinician New chapters, including: Paediatric patients; Child abuse and intimate partner violence; Geriatric patients; Tropical conditions; Mass casualty; Interpersonal communication and patient-focused care; Evidence-based practice in paramedicine; Pharmacokinetics and pharmacodynamics New case studies on major incidents and major trauma Focused 'Implications for' boxes specific to considerations including geriatrics, cultural diversity, communication challenges 'Summary of therapeutic goals' included with each case study Learning outcomes added to open each chapter Considered revision of pathophysiology across all chapters

Jürgen Trabant reads the profound insights into human semiosis contained in Vico's 'sematology' as both a spirited rejection of Cartesian philosophy and an early critique of enlightened logocentricism. Sean Ward's translation makes this work available to an English-reading audience for the first time.

This new edition has been fully revised to bring trainees and practitioners up to date with the latest developments in the management of medical emergencies and intensive care, with an emphasis on cardiac care. The book covers major medical emergencies in cardiology, pulmonary medicine, central nervous system, metabolic medicine and rheumatology. A new chapter has been added on post-operative care after cardiac surgery. Presented in an easy to read format, this practical guide includes numerous tables and graphs, with further reading suggestions for each topic. Key points Fourth edition presenting latest developments in management of medical emergencies and intensive care New chapter on post-operative care after cardiac surgery Includes numerous tables and graphs Previous edition published in 2010

The Indonesian Town Revisited reflects the growing interest in new towns and the urban sprawl around Jakarta, the economic crisis and its effects on the construction sector. Furthermore, a new direction in research is related to the growing interest in middle range cities. Some well-established topics are also covered, such as kampung improvement, urban conservation and migration.
