Parallels Desktop 8 for the Mac is an incredibly complex program that allows me to run Windows 8 on my MacBook Pro faster than I can on my windows laptop. It is nearly flawless in execution, and when a problem does crop up (and how could it not with complexity like this!), Parallels' customer support is the very best I have ever encountered...and I have been working with computer since 1966.

Teaches how to perform such modifications as running other versions of Windows within Windows 8, speeding up Web browsing, hacking Windows 8 mail, adding folders and programs to the start screen, and setting up a virtual private network.

Now you no longer have to choose between Mac OS X and Windows! The latest Macs from Apple can run both Mac OS X and Windows, so you're not limited to just one operating system. Running Windows on your Mac explains how this simple technology works and walks you through every phase of the process of setting up Windows on your Mac. Are you a

Windows user who's buying your first Mac? A Macintosh user who needs to run Windows software? Or just a computer user who wants the best of both worlds? There's something in this book for everyone. You'll find detailed instructions for installing Windows on your Mac in three easy ways; a friendly guide to the Mac for Windows users; and a handy reference to Windows for Mac users. In this book, you'll learn how to Load and configure the two most popular Mac OS X virtualization programs, Parallels Desktop for Mac and VM ware Fusion. Install Windows easily, either in Parallels or Fusion, or with Boot Camp. Keep your Windows installation in top shape, free of viruses and spyware. Run Windows applications alongside Macintosh programs. Add your new Mac to an existing Windows network. Explore the intricacies of a new operating system, whether it's Mac OS X or Windows.

If you read technology news, you'll notice it's not just a story of amazing new product introductions, or even that plus copycat product introductions. All the usual aspects of business are there: fierce competition, new contenders, old survivors, great ideas but business failures, mediocre ideas that somehow seem to succeed and prosper. As a reporter, commentator and blogger on mobile technology, I've collected what happened in the industry in 2013 and make predictions on what will and won't happen in 2014. You can read what did happen in the mobile technology in 2013. Often I deliver a comment with the news item and usually there is a link to the web page of the original announcement. This way you can dive into any detail level you desire, read my news feed for the overview or follow the related web link to the longer article. History is moving so fast now that it is all recorded electronically, but I'm surprised no one else has collected it and presented it for consideration. Here is 2013 from the mobile technology industry for your consideration along with my own observations and opinions about where things are headed. It's often overlooked that the technology industry is an industry. By that I mean its main concerns are profit and growth. As consumers we love the new products and unique abilities we are gaining from technology, but it is a business akin to any other, trying to seduce us to pry money out of our wallets. So I cover the horse race aspect of the business, who's up, who's down. Is that changing? Is that likely to change? The longer implications of what the technology industry is doing are vast and social. We are moving to an always on, always connected society where we can communicate with someone instantly and find an answer to any question quickly. The entire database of human knowledge is now available in the palm of your hand whenever you desire it. Everything is there, the good, the bad, right and wrong, hate and love, music and noise. We are obsessed with technology, not in and of itself, but as a means to an end. Technology is the means to satisfy our curiosity or even our desire for self-expression. We are taking photos machine gun-style with our smartphones and choose the few to share. As humans we are gathering ever more data about ourselves and sharing more about ourselves than we probably thought possible. Bill Gates was once asked why the computer industry had generated so much improvement in its products over a relatively few years. He gave some boring answer about Moore's Law, but the real answer is that computers are in their teenage years. They are growing and growing. They will not always do so. So too the technology industry is in a state of rapid change. I see the shift to smaller devices as a new paradigm, smashing some businesses and growing others into giants. Their stories are here in the news. In short here are predictions for what won't and will happen in 2014 for the mobile technology industry, breakdowns of marketshare figures on the horse race aspect of the business, chapters on Apple, Samsung, Google, Microsoft, Nokia, Blackberry, Amazon, Yahoo, news about social media giants Facebook, Twitter, Google+, LinkedIn, Foursquare, SnapChat and the carriers themselves Verizon, AT&T, Sprint and T-Mobile. You can also review my 2013 mobile predictions and see my track record on predictions. Finally there are some essays on how all this mobile tech is figuring into our lives. I've divided the news into the subjects it covers, but also put in the appendix all the news as it came out in chronological ordering. You can read the firehose of events in the appendix, or just read about one topic at a time in the earlier chapters. Table of Contents Preface Introduction Chapter 1: 2014 Predictions Chapter 2: Mobile Marketshare Chapter 3: Apple Chapter 4: Samsung Chapter 5: Google Chapter 6: Microsoft Chapter 7: Nokia Chapter 8: Blackberry Chapter 9: Amazon Chapter 10: Social Media Chapter 11: Yahoo Chapter 12: Carriers Chapter 13: 2013 Predictions Chapter 14: Essays Appendix
