Lehne's Pharmacotherapeutics for Advanced Practice Nurses and Physician Assistants, 2nd Edition builds on the same foundation of clearly explained, up-to-date, and clinically current content as the trusted Lehne undergraduate text, while focusing on the information that advanced practice nurses and Physician Assistants specifically need for safe and effective prescribing. Three introductory chapters provide foundational content for new prescribers in the areas of prescriptive authority, rational drug selection, prescription writing, and promoting positive outcomes of drug therapy. Core drug chapters are focused on the drugs that prescribers will most commonly see in clinical practice. Introductory chapters tailored to the specific needs of prescribers cover topics such as prescriptive authority, rational drug selection and prescription writing, and promoting positive outcomes of drug therapy. Carefully focused pharmacotherapeutic content reflects the drugs most commonly seen and used by prescribers, with emphasis not on the first drug discovered or developed in each class but on the agents most often used today. Primary care drugs are addressed first in each chapter as appropriate, followed by acute care drugs. UNIQUE! Prescriber-focused pedagogical aids further reinforce the most important information for prescribers - like Black Box Warnings that alert readers to special warnings and precautions related to particular drugs. Integrated coverage of Canadian trade names appears throughout the text and is highlighted with a familiar maple-leaf icon. Integrated coverage of interprofessional collaboration addresses the growing global interest in interprofessional collaboration and incorporates opportunities for interprofessional collaborative practice throughout. NEW! Genetic and Genomic Considerations chapter addresses our growing understanding of the importance of genetics and genomics in pharmacotherapeutic management of disease. NEW! Muscarinic Antagonists chapter expands on and clarifies coverage of this important drug class. NEW! Immunomodulators chapter covers the growing role of this innovative therapy in cancer treatment. NEW! Increased emphasis on the needs of prescribers includes new Key Prescribing Considerations specifically tailored for advanced practice nurses (APNs) and Physician Assistants (PAs), revised introductory disease content, and refocused illustrations. NEW! Expanded delineation of acute care drugs now extends to the cardiac, neurologic, hypertension, and male and female reproductive chapters. NEW! Significantly revised content on laboratory drug monitoring has been refocused on the needs of APNs and PAs NEW! Updated content on drug legislation, opioid addiction, and legalized marijuana addresses these key areas of change for prescribers. NEW! Illustrations, tables, and boxes have been substituted for text to highlight treatment guidelines (including decision-making algorithms) and drug mechanisms of action. NEW! Improved legibility includes the elimination of "small type" and a more user-friendly graphic design. NEW! Updated content covers the areas of drug legislation, opioid addiction, marijuana.

The Advanced Practice Registered Nurse as a Prescriber is an authoritative reference guide designed for students and practicing APRNs alike/delivering the evidence-based information required for informed and ethical prescribing of medication in various clinical settings. Now in its second edition, this comprehensive book offers up-to-date coverage of all critical aspects of the prescriber role, including legal and regulatory responsibilities, managing difficult patient situations, assessing and addressing special considerations with controlled substances, and more. Drawing upon their clinical and professional experience, this respected team of authors provide clear and straightforward information based on current research and reliable evidence, helping readers identify and avoid common prescribing mistakes and pitfalls whilst presenting specific strategies to respond appropriately to an array of typical clinical experiences. This revised edition includes new and expanded chapters with information on authorizing medical marijuana, prescription monitoring programs, electronic prescribing, pharmacogenetics in prescribing and patient response, and issues surrounding controlled substance prescribing and prescribing for opioid use disorder. This leading single-volume resource: Addresses the opportunities, challenges and responsibilities that APRNs face as prescribers Covers the laws, regulations, and professional issues that affect prescribing Discusses global approaches to registered nurse and APRN prescribing such as task sharing, formularies, and independent authority Guides APRNs through difficult clinical situations such as patients seeking controlled substances and requesting inappropriate care Navigates the multiple facets of prescribing controlled substances Examines the role of the APRN in states with medical marijuana laws Serves as a resource to engage in advocacy for fully autonomous prescribing The Advanced Practice Registered Nurse as a Prescriber is essential reading for APRN and pharmacotherapeutics students, registered nurses transitioning to the role of APRN prescriber, and all APRNs including Nurse Practitioners (NP), Clinical Nurse Specialists (CNS), and Certified Registered Nurse Anesthetists (CRNA).
