*Wired for Love: How Understanding Your Partner's Brain and ...*

Every person is wired for love differently, with different habits, needs, and reactions to conflict. The good news is that most people's minds work in predictable ways and respond well to security, attachment, and rituals, making it possible to actually neurologically prime the brain for greater love and fewer conflicts. Wired for Love is a complete insider's guide to understanding a partner's brain and promoting love and trust within a romantic relationship.

"What the heck is my partner thinking?" is a common refrain in romantic relationships, and with good reason. Every person is wired for love differently, with different habits, needs, and reactions to conflict. The good news is that most people's minds work in predictable ways and respond well to security, attachment, and rituals, making it possible to actually neurologically prime the brain for greater love and fewer conflicts. Wired for Love is a complete insider's guide to understanding a partner's brain and promoting love and trust within a romantic relationship. Readers learn ten scientific principles they can use to avoid triggering fear and panic in their partners, manage their partners' emotional reactions when they do become upset, and recognize when the brain's threat response is hindering their ability to act in a loving way. By learning to use simple gestures and words,

readers can learn to put out emotional fires and help their partners feel more safe and secure. The no-fault view of conflict in this book encourages readers to move past a "warring brain" mentality and toward a more cooperative "loving brain" understanding of the relationship. Based in the sound science of neurobiology, attachment theory, and emotion regulation research, this book is essential reading for couples and others interested in understanding the complex dynamics at work behind love and trust in intimate relationships.

"What the heck is my partner thinking?" is a common refrain in romantic relationships, and with good reason. Every person is wired for love differently, with different habits, needs, and reactions to conflict. The good news is that most people's minds work in predictable ways and respond well to security, attachment, and rituals, making it possible to actually neurologically prime the brain for greater love and fewer conflicts. *Wired for Love* is a complete insider's guide to understanding your partner's brain and enjoying a romantic relationship built on love and trust. Synthesizing research findings on how and why love lasts drawn from neuroscience, attachment theory, and emotion regulation, this book presents ten guiding principles that can improve any relationship. Strengthen your relationship by:

- Creating and maintaining a safe "couple bubble"
- Using morning and evening rituals to stay connected
- Learning to fight so that nobody loses
- Becoming the expert on what makes your partner feel loved

By learning to use simple gestures and words, readers can learn to put out emotional fires and help their partners feel more safe and secure. The no-fault view of conflict in this book encourages readers to move past a "warring brain" mentality and toward a more cooperative "loving brain" understanding of the relationship. This book is essential reading for couples and others interested in understanding the complex dynamics at work behind love and trust in intimate relationships. While there's no doubt that love is an inexact science, if you can discover how you and your partner are wired differently, you can overcome your differences to create a lasting intimate connection.

In the age of online dating, finding a real connection can seem more daunting than ever! So, why not stack the odds of finding the right person in your favor? This book offers simple, proven-effective principles drawn from neuroscience and attachment theory to help you find the perfect mate. Everybody wants someone to love and spend time with, and searching for your ideal partner is a natural and healthy human tendency. Just about everyone dates at some point in their lives, yet few really understand what they're doing or how to get the best results. In *Wired for Dating*, psychologist and relationship expert Stan Tatkin—author of *Wired for Love*—offers powerful tips based in neuroscience and attachment theory to help you find a compatible mate and go on to create a fabulous relationship. Using real-life scenarios, you'll learn key concepts about how people become attracted to potential partners, move toward or away from commitment, and the important role the brain and nervous system play in this process. Each chapter explores the scientific concepts of attachment theory, arousal regulation, and neuroscience. And with a little practice, you'll learn to apply these exercises and practical techniques to your dating life. If you're ready to get serious (or not!) about dating, meet your match, and have more fun, this book will be your guide.

"If you and your prospective partner adopt the principles and skills I describe here, your relationship will be successful—not just for starters, but for the long run." An indispensable guide for any couple ready to set the foundation for a loving and lasting union. Committing fully to a loving partnership—a "we"—can be one of the most beautiful and fulfilling experiences you'll ever have. Yet as anyone in a long-term relationship will tell you, it can also be one of the most challenging. Almost half of all first marriages end in divorce, and chances go down from there. So how do you beat the odds? "All successful long-term relationships are secure relationships," writes psychotherapist Stan Tatkin. "You and your partner take care of each other in a way that ensures you both feel safe, protected, accepted, and secure at all times." In *We Do*, Tatkin provides a groundbreaking guide for couples. You'll figure out whether you and your partner are right for each other in the long term, and if so, give your relationship a strong foundation so you can enjoy a secure and lasting love. Highlights include: Create a shared vision for your relationship, the key to a strong foundation. It's all about prevention—learn tools and techniques for preventing problems before they occur. Understand how to work with the psychological and biological influences in your relationship—neuroscience, arousal regulation, attachment theory, and more. Numerous case studies with helpful examples of healthy and unhealthy interactions, sample dialogues, and reflections. Dozens of exercises—the newlywed game, reading facial expressions, and many more fun and serious practices to develop intimacy and security. Handling conflict—how to broker win-win outcomes. Build a loving relationship that helps you thrive and grow as both individuals and a couple. Common interests, physical attraction, shared values, and good communication skills are the factors most commonly thought to indicate a good partnership. Yet surprisingly, current research reveals that these are only a small part of what makes for a healthy marriage—much more important are psychological and biological influences. With *We Do*, you'll learn to navigate these elements and more, giving your relationship the best possible chance to succeed.

From the world's foremost neuroscientist of romantic love comes a personal story of connection and heartbreak that brings new understanding to an old truth: better to have loved and lost than never to have loved at all. At thirty-seven, Dr. Stephanie Cacioppo was content to be single. She was fulfilled by her work on the neuroscience of romantic love—how finding and growing with a partner literally reshapes our brains. That was, until she met the foremost neuroscientist of loneliness. A whirlwind romance led to marriage and to sharing an office at the University of Chicago. After seven years of being inseparable at work and at home, Stephanie lost her beloved husband, John, following his intense battle with cancer. In *Wired for Love*, Stephanie tells not just a science story but also a love story.

She shares revelatory insights into how and why we fall in love, what makes love last, and how we process love lost—all grounded in cutting-edge findings in brain chemistry and behavioral science. Woven through it all is her moving personal story, from astonishment to unbreakable bond to grief and healing. Her experience and her work enrich each other, creating a singular blend of science and lyricism that's essential reading for anyone looking for connection.

"Over a decade after its publication, one book on dating has people firmly in its grip." —The New York Times We already rely on science to tell us what to eat, when to exercise, and how long to sleep. Why not use science to help us improve our relationships? In this revolutionary book, psychiatrist and neuroscientist Dr. Amir Levine and Rachel Heller scientifically explain why some people seem to navigate relationships effortlessly, while others struggle. Discover how an understanding of adult attachment—the most advanced relationship science in existence today—can help us find and sustain love. Pioneered by psychologist John Bowlby in the 1950s, the field of attachment posits that each of us behaves in relationships in one of three distinct ways: • Anxious people are often preoccupied with their relationships and tend to worry about their partner's ability to love them back • Avoidant people equate intimacy with a loss of independence and constantly try to minimize closeness. • Secure people feel comfortable with intimacy and are usually warm and loving. Attached guides readers in determining what attachment style they and their mate (or potential mate) follow, offering a road map for building stronger, more fulfilling connections with the people they love.

Neuroscience and couples therapy come together to help couples break patterns of bad behavior. What happens between partners that makes love turn to war? How can couples therapists help deescalate the battles? Two leading therapists apply the latest neuroscience research on emotional arousal to help couples regulate each other's emotions, maintain secure attachment, and foster positive, enduring relationships. The neurobiologically-grounded and sensitive approach set forth by Solomon and Tatkin in this book is sure to transform the way clinicians understand and treat couples in therapy.

A marriage therapist and pastoral counselor explains that most of the feelings of receiving inadequate love come from unresolved childhood conflicts and describes how adults can learn to flourish as loving and loved people, in a new edition of the best-selling handbook. Reprint. 50,000 first printing.

This original and lucid account of the complexities of love and its essential role in human well-being draws on the latest scientific research. Three eminent psychiatrists tackle the difficult task of reconciling what artists and thinkers have known for thousands of years about the human heart with what has only recently been learned about the primitive functions of the human brain. A General Theory of Love demonstrates that our nervous systems are not self-contained: from earliest childhood, our brains actually link with those of the people close to us, in a silent rhythm that alters the very structure of our brains, establishes life-long emotional patterns, and makes us, in large part, who we are. Explaining how relationships function, how parents shape their child's developing self, how psychotherapy really works, and how our society dangerously flouts essential emotional laws, this is a work of rare passion and eloquence that will forever change the way you think about human intimacy.

It's time to say NO to trying to fit square-peg kids into round holes, and YES to raising them from a place of acceptance and joy. Today millions of kids are stuck in a world that doesn't embrace who they really are. They are the one in five "differently wired" children with ADHD, dyslexia, giftedness, autism, anxiety, or other neurodifferences, and their challenges are many. And for the parents who love them, the challenges are just as numerous, as they struggle to find the right school, the right support, the right path. But now there's hope. Differently Wired is a revolutionary book—weaving together personal stories and a tool kit of expert advice from author Deborah Reber, it's a how-to, a manifesto, and a reassuring companion for parents who can so often feel that they have no place to turn. At the heart of Differently Wired are 18 paradigm-shifting ideas—what the author calls "tilts," which include how to accept and lean in to your role as a parent (#2: Get Out of Isolation and Connect). Deal with the challenges of parenting a differently wired child (#5: Parent from a Place of Possibility Instead of Fear). Support yourself (#11: Let Go of Your Impossible Expectations for Who You "Should" Be as a Parent). And seek community (#18: If It Doesn't Exist, Create It). Taken together, it's a lifesaving program to shift our thinking and actions in a way that not only improves the family dynamic, but also allows children to fully realize their best selves. "In this generous and urgent book, Deborah Reber lets the light in. She helps parents see that they're not alone, and even better, delivers a positive action plan that will change lives."—Seth Godin, author of Linchpin "Differently Wired will help parents of children who think differently to accept their child for who they are and facilitate their successful development."—Temple Grandin, author of Thinking in Pictures and The Autistic Brain
